

Skip the endless alerts. We'll do the work for you.

Our third-party, vendor-neutral quick assessment will give you a free detailed snapshot of your storage environment. With cohesive data about your configuration, performance, health, and optimization, you can take action *before* something becomes a problem.

## HOW IT WORKS

Visual One Intelligence's™ third-party quick assessment only requires:

- A data collection set up call (1-2 hours) with VSI consultant
- CLI or REST API for data collection process

*That's it! Our assessment is not vendor-specific.*

Within 48 hours results will be completed and documented. We will host a one-hour call to discuss the results with you.

## QUICK ASSESSMENT CLIENT INSIGHTS

### Reclaimed Space: Postpone Your Next Storage Purchase

By identifying "orphaned" space, fragmented storage, and other capacity reclamation opportunities, clients can often reclaim 8-10% of their existing capacity.

### Application Performance: Stop Problems Before They're Noticed

Through captured performance data, we can identify performance trends that can be causing poor response time with the end user - resulting in 5% improved productivity.

### Health Alerts: Identify Issues Before an Outage

By looking at the configuration of each array, it is typical to find misconfigured firmware, misaligned drives, and other risks lurking beneath the surface.

### Maintenance Consolidation: Refresh Your Storage

As time passes and components grow older, storage maintenance costs can skyrocket. A quick assessment can help identify the best places or workloads to reduce your footprint.
