

We'll find the important stuff for you.

Visual Storage Intelligence® goes further than other software tools. Our virtual assistant sends an executive analysis of your environment to your email inbox each week highlighting the changes and alerts you care about. Start each week with a strategic to-do list of critical action items.

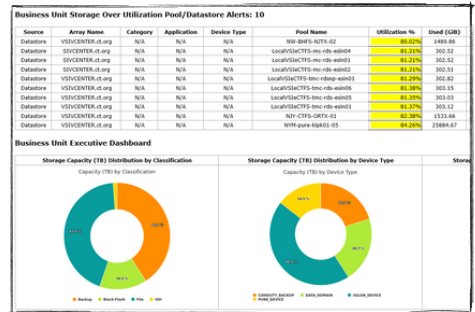

### Consolidated Insights

You shouldn't have to search through reams of data just to find the most important updates. Our weekly emails pull the **needles out of the haystack**, highlighting the changes that are most relevant and consequential to you.

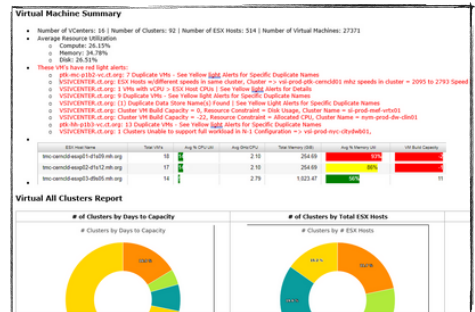

### Preemptive Alerts

Too many monitoring tools only alert you after the damage is done. We believe in being proactive, alerting you to **potential problems before they happen** - so you have time to assess, remediate, and prevent.

### Virtual & Cloud Analysis

Quickly absorb summaries of your VM and cloud data, including red light alerts, utilization trends, and estimated **days until clusters reach capacity**.

## Weekly Efficiency Analysis also includes:

- Utilization & Performance Trends
- Capacity Growth & Forecast Breakdowns
- Over-Utilization Alerts
- Executive Dashboards & Storage Charts
