

100% ROI in Weeks

Without Real-Time Monitoring

A major insurance company wanted a real-time monitoring tool. So they were surprised when Visual One's alternative - predictive analytics - provided better results and 100% ROI in mere weeks.

1

INDUSTRY STANDARD?

Tired of constant troubleshooting in their storage environment, this infrastructure team believed a real-time monitoring tool would be the key to reducing their workload.

2

UNEXPECTED GAPS

What they didn't know is that real-time monitoring only adds alerts and additional work for IT teams. It doesn't inherently prevent problems or improve efficiency.

3

A NEW APPROACH

Visual One Intelligence uses predictive analytics instead of real-time monitoring. Those predictive analytics immediately found over 30 TB of wasted storage their team didn't know about - something real-time monitoring tools can't identify.

4

100% ROI: MONEY WELL SPENT

By recovering 30 TB of space, the organization saved at least \$20,000 - more than the cost of their entire annual Visual One subscription!
